LAB 7 - FUZZ TESTING

Name: I.V. Thanvitha
Section: D
SRN: PES2UG24CS197

1. Initial application output

Run on a locally prepared baseline with missing input checks.

▸ **Windows PowerShell • Terminal output**

```
PS> C:\Program Files\Python311\python.exe processor.py
Parsed integers: [2, 4, 6]
Normalized username: transit_user-7
Average: 20.0
```

2. Hypothesis tests before fixes

The baseline produces two failures on non-string inputs.

▸ **Windows PowerShell • Terminal output**

```
PS> C:\Program Files\Python311\python.exe -m pytest -q --tb=short test_processor.py
.......FF                                                                [100%]

========================== short test summary info ============================
FAILED test_processor.py::test_parse_int_list_rejects_non_string_inputs - Att...
FAILED test_processor.py::test_normalize_username_rejects_non_string_inputs
2 failed, 7 passed in 3.28s
```

3. Fixed application output

Run on the processor included with this submission.

▸ **Windows PowerShell • Terminal output**

```
PS> C:\Program Files\Python311\python.exe processor.py
Parsed integers: [2, 4, 6]
Normalized username: transit_user-7
Average: 20.0
```

4. Hypothesis tests after fixes

All nine tests passed.

▸ **Windows PowerShell • Terminal output**

```
PS> python -m pytest -q --tb=short test_processor.py
.........                                                [100%]
9 passed in 3.09s
```
